

## Training and Employment of Geodesists

An increased interest in the construction industry in Georgia created demand for professional staff in this field. The aim of the new project of the Education and Employment Center (EEC) was to train 10 persons in land measuring. Over a period of four months intensive training courses were held six times per week. The courses consisted of both: theoretical and practical teachings. During the theoretical courses the trainees learned the following computer programmes: ARCHICAD, ARCHSIS, AUTOCAD LAND DESC, AUTOCAD CIVIL 3D, PHOTOSHOP. As for the practical course, the course participants worked in the fields and made small land drawings.

Four of the project beneficiaries were later employed by an EEC's partner organization in Tbilisi. And one beneficiary was employed in Kutaisi.
